

# 4 Good Reasons for a Change.

**Good is not good enough – and now we have made ProfilGate even better!**  
We have redeveloped the brush bodies, the central element of the ProfilGate, for an even better cleaning and more functionality. The new brush bodies are easy to replace and fit all previously supplied versions.

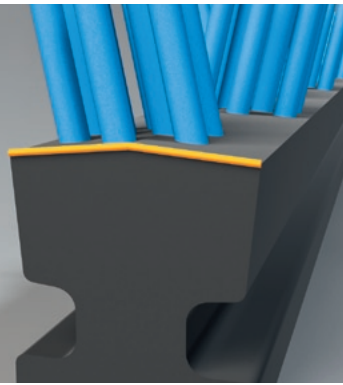

# 1

## New Brushes

The brand new developed brushes have been optimized for a maximum cleaning performance. Thanks to the new bright blue colour, one can now also clearly recognize where the clean zone begins.

# 2

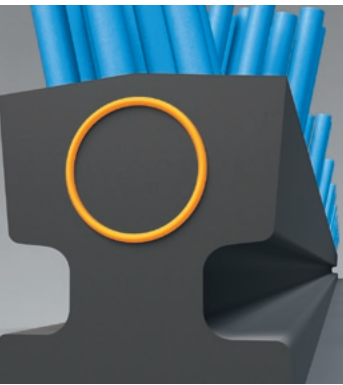

## New roof-shaped body

The upper part of the brush body now has the shape of a roof. This allows liquids and dirt particles to run off to the sides and drop down into the tray more easily.

The reduced brush body width of only 22 mm makes particles with a width of up to 8 mm drop down directly into the tray, instead of remaining inside the brush area.

# 3

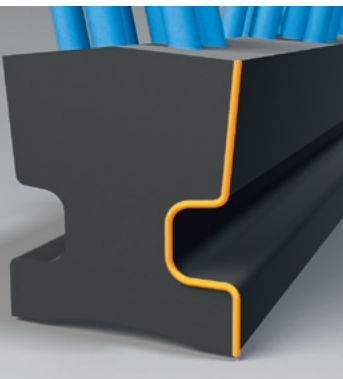

## New material

The new brush bodies are made of PVC instead of PE. This makes them withstand cold weather conditions much better, for example when placed in access areas with frosty temperatures.

At the same time the PVC is more durable and keeps the tension of the bow-formed brush body much longer, necessary for a thorough cleaning.

# 4

## New profiled body

The brand new developed brush body now has a waisted form, so that even bigger dirt particles and smaller stones drop down more easily into the tray, once the upper edge is passed.

Thanks to the narrow design in the lower part, you can now vacuum the dirt without having to lift the grids. This makes it much easier to handle and saves your people a lot of time.
